

Building up the New Leadership in Clinical Trials

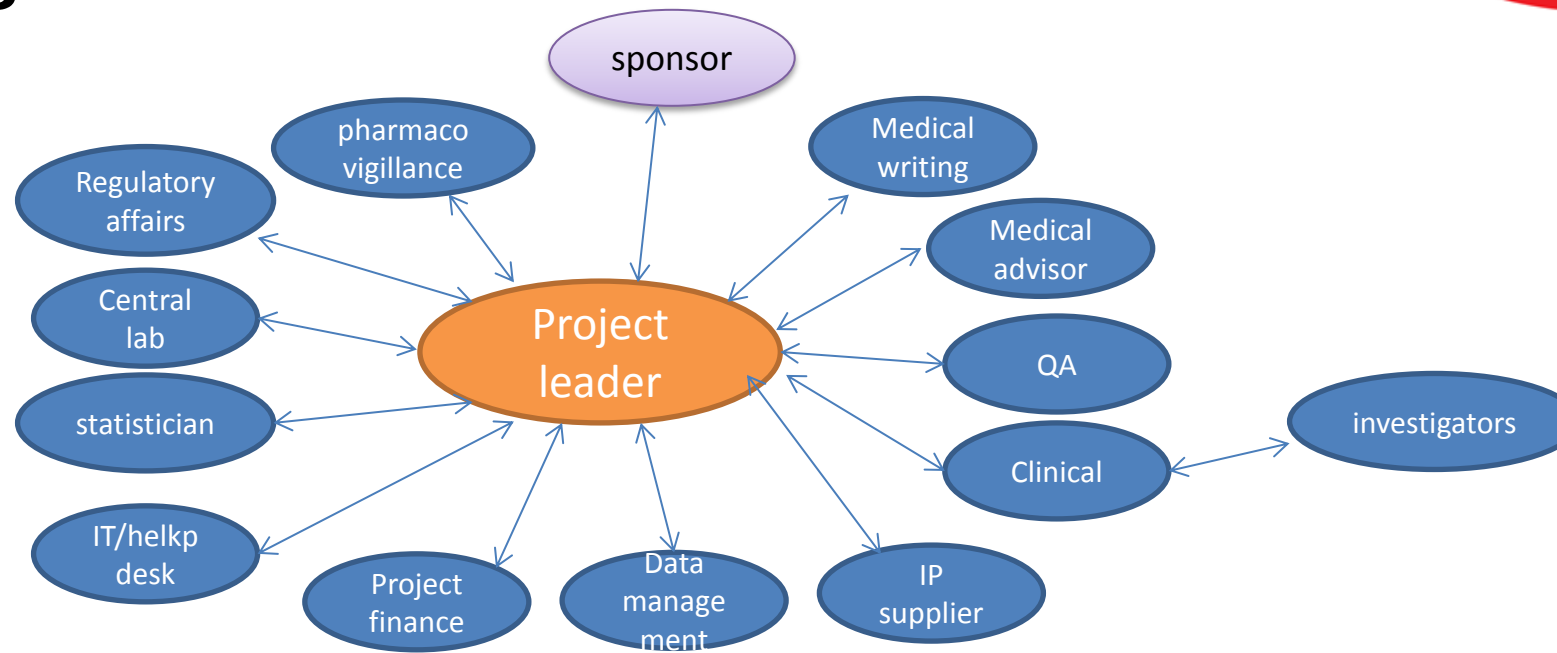

Dr. Cristina Florescu Moraid, MSc, EUSpLM, MRQA
CEO Avantyo-Institute of Clinical Research

Project leadership

- Clinical trial management is more and more moving to a "**management by objectives**" way of business.
- Most clinical trials are operated by trial teams with specific team objectives.

Project leadership

- A project leader requires exceptional organizational skills

NEW DRUG

requires in depth
knowledge

many clinical, biological,
pharmacological and
chemical parameters.

CT Project leader

The CT project leader needs to ensure that all requirements are met:

- project sponsor requirements/expectations
- scope of project, countries involved
- timelines and milestones
- internal project resourcing, training of team members
- third-party providers
- E-Clinical tools
- budget
- applicable regulations and ethical aspects
- finalization of study protocol, CRF, patient diaries
- investigational product availability.

CT Project Leader

- **Effective project leaders care about individuals and their culture**

Team Communication

- Within clinical trial management, cultural differences become most evident in team communication.

- People from different countries use different ways to express themselves.

Project managers vs leaders

- Apart from cultural aspects, personal aspects are important to be a successful team leader. People learn differently and work and make decisions in different ways.
- **The best project managers are also outstanding leaders**

Why do some project leaders still fail?

1. A project leader requires many specific skills.
2. Focusing too much on project tasks that relate to their background (e.g., monitoring or statistics).
3. Unrealistically timelines or the available budget is far too limited to successfully complete a project.
4. Many times the reason for failure is a total lack of empowerment of the project leader

Trends in clinical trials 2019/2020

- Five transformation trends with regard to clinical trials:
 1. **Data- and technology-enabled patient discovery and recruiting.**
 2. **Seamless patient “CRM” and retention management**
 3. **Incorporation of real-world data into trial protocols**

Trends in clinical trials 2019/2020

4. Virtual trials are the future

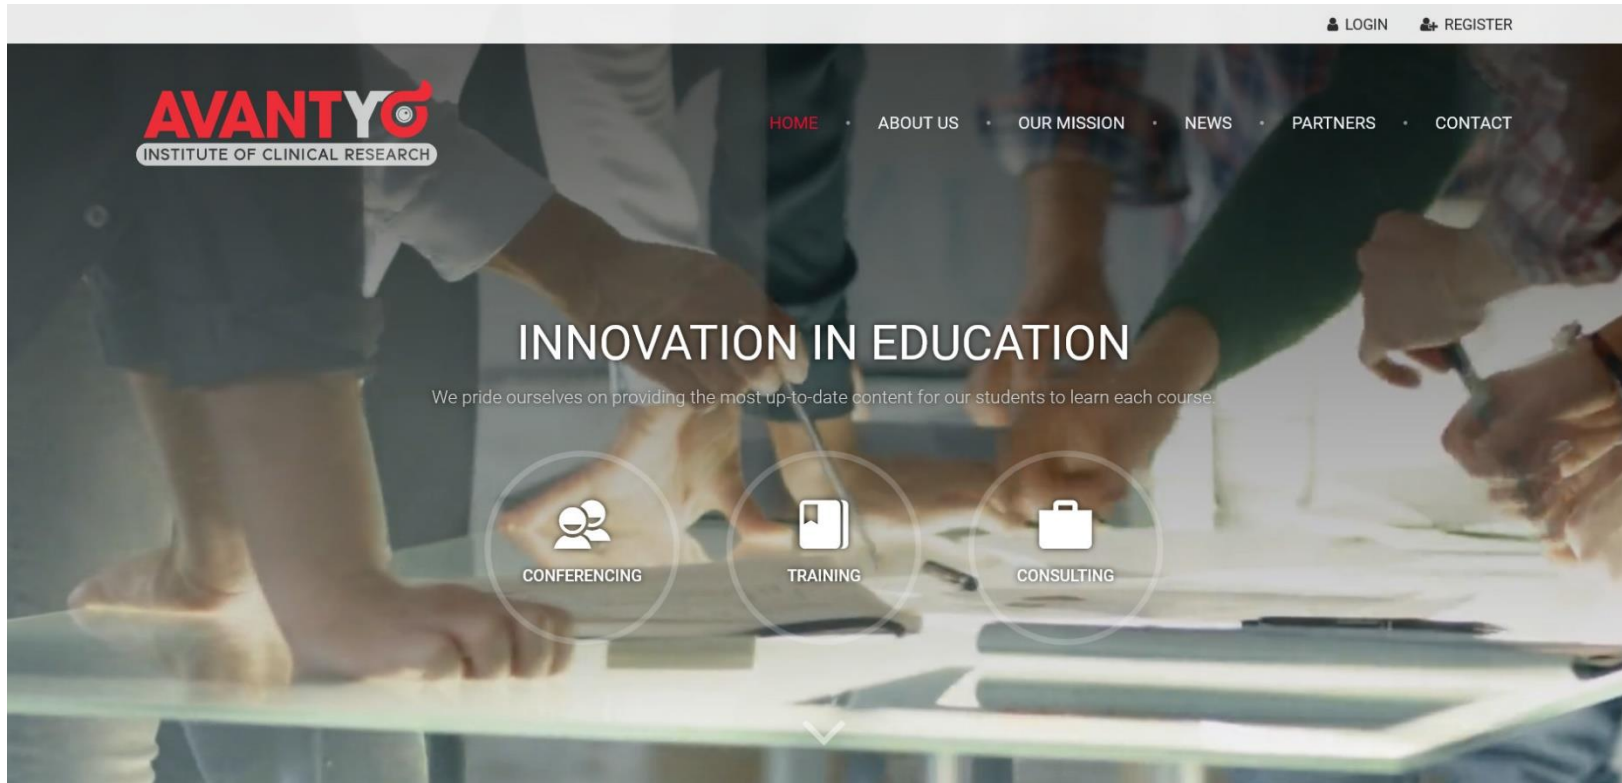

5. Integrated research organizations usher in the clinical research as a care option age.

Educated and skilled professionals

Our constant mission as CT professionals:

to increase the quality, quantity and efficiency of translating fundamental science advances into improved clinical care for our patients.

Our tools

Avantyo-Institute of Clinical Research

Our activities

CONFERENCING

AVANTYO offers a premium platform for interactive networking between the various actors in the clinical research field in form of a yearly international conference.

[FIND OUT MORE >](#)

TRAININGS

We improve education in clinical research by bringing together most senior experts from all segments of the clinical research arena with the new leaders, with satellite stakeholders, as well as with direct and in-direct decision makers which impact on the efficiency of the the clinical research process – all with the ultimate goal to enable patients's access to new medicines faster. The trainings are organized in form of a series of Workshops and Roundtables, which shall take place across the year.

CRA/Monitors

A Clinical Research Associate is the person responsible for ensuring that the clinical trial is conducted in accordance with Good Clinical Practice (GCP) protocol and applicable legislation.

Study nurses

The Clinical Research Nurse, under the guidance and supervision of the Principal Investigator (PI), ensures that the clinical trials are conducted in accordance with the study protocol.

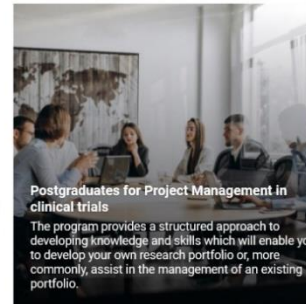

Investigators / Study coordinators

This course addresses to physicians, both newly graduates or experienced, interested to contribute to the progress of medical research.

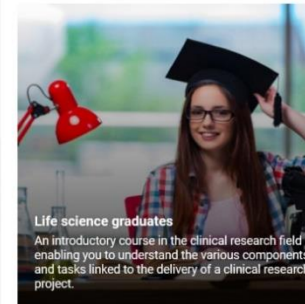

GCP

Good Clinical Practice (GCP) course is designed to prepare research staff in the conduct of clinical trials with human participants.

Postgraduates for Project Management in clinical trials

The program provides a structured approach to developing knowledge and skills which will enable you to develop your own research portfolio or, more commonly, assist in the management of an existing portfolio.

Life science graduates

An introductory course in the clinical research field, enabling you to understand the various components, and tasks linked to the delivery of a clinical research project.

GDPR

The aim of this training is to explain in much more depth the legal basis for processing personal data in the context of clinical trials.

Avantyo-Institute of Clinical Research

WHAT TYPE OF AN ACCOUNT YOU NEED?

- ✓ Book conferences, symposiums, courses and trainings in bulk
- ✓ Create and manage a list of employees
- ✓ Get a centralized report of your bookings
- ✓ Easier payment for all your bookings

COMPANY ACCOUNT

- ✓ Book conferences, symposiums, courses and training only for yourself
- ✓ Keep track of your bookings
- ✓ Stay in touch with all news from the industry
- ✓ Network with other experts in your niche

INDIVIDUAL ACCOUNT

*If you change your account from **COMPANY** to **INDIVIDUAL**, all your employees data will be erased after 30 days.*

During this time you can always take on from where you left.

Don't worry, you can change your mind at any time.

Avantyo's mission

- AVANTYO's mission is to enable patients to access novel medicine faster by offering an efficient platform for clinical research professionals to meet and interact with the purpose to advance medical science.
